ABSTRACT:

PURPOSE: To obtain a cooked rice food for cooking convertible into a product in a very short time by preparing rice absorbing water using hot water and/or steam at $\geq 60^{\circ}\text{C}$ and treating the resultant rice with hot water, steam and/or a pressure vessel at $\geq 80^{\circ}\text{C}$.

CONSTITUTION: Rice is treated with hot water and/or steam at $\geq 60^{\circ}\text{C}$ to provide rice absorbing water with 38-115 pts.wt. water content based on 100 pts.wt. rice. The aforementioned rice absorbing water is then treated with hot water or a soup stock, cream sauce,

etc., or steam, etc., a pressure vessel, metallic mold, etc., at $\geq 80^{\circ}\text{C}$ to afford cooked rice for cooking with 60-160 pts. wt. water content based on 100 pts. wt. rice. The rice absorbing water or cooked rice for cooking, as desired, is subjected to processing treatment such as heating, hydrating or seasoning according to a conventional method to provide a seasoned processed cooked rice such as rice gratin or doria, pilaf, risotto or gruel or paella.
